

bundle

Dependency manager for the Ruby programming language.

- Install all gems defined in the gemfile expected in the working directory:

```
bundle install
```

- Update all gems by the rules defined in the gemfile and regenerate gemfile.lock:

```
bundle update
```

- Update one specific gem defined in the gemfile:

```
bundle update --source {{gemname}}
```

- Create a new gem skeleton:

```
bundle gem {{gemname}}
```
