

npm

JavaScript and Node.js package manager.
Manage Node.js projects and their module dependencies.

- Download and install a module globally:

```
npm install -g {{module_name}}
```

- Download all dependencies referenced in package.json:

```
npm install
```

- Download a given dependency required for the application to run, and add it to the package.json:

```
npm install {{module_name}}@{{version}} --save
```

- Download a given dependency for development purposes, and add it to the package.json:

```
npm install {{module_name}}@{{version}} --save-dev
```

- Uninstall a module:

```
npm uninstall {{module_name}}
```

- List a tree of installed modules referenced in package.json:

```
npm list
```

- List top-level globally installed modules:

```
npm list -g --depth={{0}}
```

- Interactively create a package.json file:

```
npm init
```
