

yarn

JavaScript and Node.js package manager alternative.

- Install a module globally:

```
yarn global add {{module_name}}
```

- Install all dependencies referenced in the package.json file:

```
yarn
```

- Install a module and save it as a dependency to the package.json file (add --dev to save as a dev dependency):

```
yarn add {{module_name}}@{{version}}
```

- Uninstall a module and remove it from the package.json file:

```
yarn remove {{module_name}}
```

- Interactively create a package.json file:

```
yarn init
```

- Identify whether a module is a dependency and list other modules that depend upon it:

```
yarn why {{module_name}}
```
