

lxc

Manage Linux containers using the lxd REST API.
Any container names or patterns can be prefixed with the name of a remote server.

- List local containers matching a string. Omit the string to list all local containers:

```
lxc list {{match_string}}
```

- List images matching a string. Omit the string to list all images:

```
lxc image list [{{remote}}:][{{match_string}}
```

- Create a new container from an image:

```
lxc launch [{{remote}}:][{{image}}] {{container}}
```

- Start a container:

```
lxc start [{{remote}}:][{{container}}
```

- Stop a container:

```
lxc stop [{{remote}}:][{{container}}
```

- Show detailed info about a container:

```
lxc info [{{remote}}:][{{container}}
```

- Take a snapshot of a container:

```
lxc snapshot [{{remote}}:][{{container}}] {{snapshot}}
```
