

meteor

Full-stack javascript platform for building web applications.

- Run a meteor project from its root directory in development mode:

`meteor`

- Create a project under the given directory:

`meteor create {{path/to/directory}}`

- Display the list of packages the project is currently using:

`meteor list`

- Add a package to the project:

`meteor add {{package_name}}`

- Remove a package from the project:

`meteor remove {{package_name}}`

- Create a production build of the project as a tarball under the given directory:

`meteor build {{path/to/directory}}`
