

pacman

Arch Linux package manager utility.

- Synchronize and update all packages:

```
pacman -Syu
```

- Install a new package:

```
pacman -S {{package_name}}
```

- Remove a package and its dependencies:

```
pacman -Rs {{package_name}}
```

- Search the package database for a regular expression or keyword:

```
pacman -Ss "{{search_pattern}}"
```

- List installed packages and versions:

```
pacman -Q
```

- List only the explicitly installed packages and versions:

```
pacman -Qe
```

- Find which package owns a certain file:

```
pacman -Qo {{filename}}
```

- Empty package cache to free up space:

```
pacman -Scc
```
