

netstat

Displays various networks related information such as open connections, open socket ports etc.

- List all ports:

```
netstat -a
```

- List all listening ports:

```
netstat -l
```

- List listening TCP ports:

```
netstat -t
```

- Display PID and program names:

```
netstat -p
```

- List information continuously:

```
netstat -c
```

- List routes and do not resolve IP to hostname:

```
netstat -rn
```

- List listening TCP and UDP ports (+ user and process if you're root):

```
netstat -ltpunt
```
