

# vimdiff

Open up to four files in vim and show the differences between them.  
See vim documentation for working with files and navigating within a window.

- Open two files and show the differences (up to four files can be compared):

```
vimdiff {{file1}} {{file2}}
```

- Open two files using a horizontal window split instead of the default vertical split:

```
vimdiff -o {{file1}} {{file2}}
```

- Move the cursor to the window on the left|right|up|down:

```
Ctrl + w {{h|l|k|j}}
```
