

zramctl

Setup and control zram devices.
Use mke2fs or mkswap to format zram devices to partitions.

- Check if zram is enabled:

```
lsmod | grep -i zram
```

- Enable zram with 2 devices (use zramctl to configure the devices further):

```
sudo modprobe zram num_devices={{2}}
```

- Find and initialise the next free zram device to a 2GB virtual drive using LZ4 compression:

```
sudo zramctl --find --size {{2GB}} --algorithm {{lz4}}
```

- List currently initialised devices:

```
zramctl
```
