

firewall-cmd

The firewalld command line client.

- View the available firewall zones:

```
firewall-cmd --get-active-zones
```

- View the rules which are currently applied:

```
firewall-cmd --list-all
```

- Permanently open the port for a service in the specified zone (like port 443 when in the public zone):

```
firewall-cmd --permanent --zone={{public}} --add-service={{https}}
```

- Permanently close the port for a service in the specified zone (like port 80 when in the public zone):

```
firewall-cmd --permanent --zone={{public}} --remove-service={{http}}
```

- Reload firewalld to force rule changes to take effect:

```
firewall-cmd --reload
```
