

browser-sync

Starts local web server that updates browser on file changes.

- Start a server from a specific directory:

```
browser-sync start --server {{path/to/directory}} --files {{path/to/directory}}
```

- Start a server from local directory, watching all css files in some directory:

```
browser-sync start --server --files '{{path/to/directory/*.css}}'
```

- Create configuration file:

```
browser-sync init
```

- Start browser-sync from config file:

```
browser-sync start --config {{config_file}}
```
