

dep

Tool for dependency management in Go projects.

- Initialize the current directory as the root of a Go project:

```
dep init
```

- Install any missing dependencies (Scans Gopkg.toml and your .go files):

```
dep ensure
```

- Report the status of the project's dependencies:

```
dep status
```

- Add a dependency to the project:

```
dep ensure -add {{package_url}}
```

- Update the locked versions of all dependencies:

```
dep ensure -update
```
