

pipenv

Simple and unified Python development workflow.
Manages packages and the virtual environment for a project.

- Create a new project:

`pipenv`

- Create a new project using Python 3:

`pipenv --three`

- Install a package:

`pipenv install {{package_name}}`

- Install all the dependencies for a project (including dev):

`pipenv install --dev`

- Uninstall a package:

`pipenv uninstall {{package_name}}`

- Start a shell within the created virtual environment:

`pipenv shell`
