

git submodule

Inspects, updates and manages submodules.

- Install a repository's specified submodules:

```
git submodule update --init --recursive
```

- Add a git repository as a submodule:

```
git submodule add {{repository_url}}
```

- Add a git repository as a submodule at the specified directory:

```
git submodule add {{repository_url}} {{path/to/directory}}
```

- Update every submodule to its latest commit:

```
git submodule foreach git pull
```
