

git show

Show various types of git objects (commits, tags, etc.).

- Show information about the latest commit (message, changes, and other metadata):

```
git show
```

- Show information about a given commit:

```
git show {{commit}}
```

- Show information about the commit associated with a given tag:

```
git show {{tag}}
```

- Show information about the 3rd commit from the tip of a branch:

```
git show {{branch}}~{{3}}
```

- Show a commit's hash and message in a single line, suppressing the diff output:

```
git show --oneline -s {{commit}}
```
