shopt

> Manage Bash shell options: variables (stored in $BASHOPTS) that control behavior
> specific to the Bash shell.
> Generic POSIX shell variables (stored in $SHELLOPTS) are managed with the set
> command instead.

- List of all settable options and whether they are set:

`shopt`

- Set an option:

`shopt -s {{option_name}}`

- Unset an option:

`shopt -u {{option_name}}`

- Print a list of all options and their status formatted as runnable shopt commands:

`shopt -p`

- Show help for the command:

`help shopt`
