# renice

Alters the scheduling priority/nicenesses of one or more running processes. Niceness values range from –20 (most favorable to the process) to 19 (least favorable to the process).

- Change priority of a running process:

```
renice -n {{niceness_value}} -p {{pid}}
```

- Change priority of all processes owned by a user:

```
renice -n {{niceness_value}} -u {{user}}
```

- Change priority of all processes that belongs to a group:

```
renice -n {{niceness_value}} -g {{group}}
```
